DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

Claims 1-5, 7-23, 25-33, 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaler of record for reasons of record.

Claim Rejections - 35 USC § 102

Claims 1-5, 7-23, 25-33 and 57 are rejected under 35 U.S.C. 102(a) as being anticipated by Burke of record for reasons of record.

Claims 1-5, 7-23, 25-33 and 57 are rejected under 35 U.S.C. 102(b) as being anticipated by Hughes of record for reasons of record.

Response to Arguments

Applicant's arguments filed 12/4/08 have been fully considered but they are not persuasive.

With regard to the Kaler reference, applicants argue that the "Kaler reference is in stark contract to the object of the present invention and a person of ordinary skill in the art would be unable to import the teachings of Kaler to Applicants' invention."

The claims, in particular 1-5, 7-19 are apparatus claims. The intended use limitations are given little or no patentable weight in apparatus claims. That the reference might have a thrust of purported innovation different from the claimed invention, does not render the disclosure of Kaler defective in teaching the instant application.

Applicants have not pointed out the structure being different from the claimed structure, in particular in claim 1 or the different method steps in claim 20.

With regard to the Burke article, applicants state that the reference formed the very basis of Applicants provisional application and would not be prior art.

Applicants have not shown that the reference was published after the date of the provisional application. In the alternative applicants can file a declaration which would overcome the date of the reference.

With regard to the Hughes references, applicants argue that the Hughes reference does not disclose electrodes electrically coupled to time-varying voltage sources.

The Hughes reference teaches the use of AC fields, which would be time varying voltage sources (see page 125). Furthermore, the reference teaches the particle manipulation (see page 125 second col.).

Applicants further argue that the Hughes reference fails to disclose the cylindrically shaped electrode, rather it contemplates electrodes all on the same plane.

The Hughes reference discloses the stacking of electrodes which would not be within the same plane and would encompass the claimed cylindrical structure (see page 127).

Accordingly, the claims stand rejected.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
